A makeover too far: Fergie unveils her new look

## Stunned but not stunning

TAMMY WYNETTE got it right: It's hard to be a woman. Just when you think you've got one sign of ageing under control, the Age Police come up with an entirely new zone to feel neurotic about.

What do you mean, you're still trying out cellulite treatments? Do try to keep up, madam!

Thighs like half-set apricot mousse are last year's problem. Apparently, we're now on to injecting fat from your bottom into the back of your hands and breasts for a "natural" increase in cup size. Judging by recent pictures, I'm afraid the Duchess of York may have gone one step further and had her behind injected into her face. It gives a whole new meaning to the phrase: "Kiss my a\*\*."

Fergie's latest makeover shows her minus laughter lines, smiley eyes and trademark freckly face. Instead, we see a plumped-up, oddly expressionless woman looking stunned rather than stunning.

What other areas of the body do you imagine we will be pressured into updating next? Are your earlobes giving your age away? Should you have the back of your neck moved round to the front? Whatever you do, it'll never be enough to satisfy the Age Police.

As one Manhattan surgeon says of his patients: "Today, their "before" pictures are what patients in the past wished their "after" pictures looked like."
